# Muffler and Silencer Design

---

Vibro-Acoustics Consortium Web Meeting  
University of Kentucky

---

**Vibro-Acoustics Consortium**

# Overview

---

- Fundamental Concepts
- Illustrative Examples
- Conceptual Design
- Detailed Design
- Prototyping / Testing

# Performance Measures Transmission Loss

Transmission loss ( $TL$ ) of the muffler:

$$TL = 10 \log_{10} \frac{W_i}{W_t}$$

# Performance Measures Insertion Loss

$$IL(dB) = L_{W1} - L_{W2}$$

- Insertion loss depends on :
- Muffler
  - Lengths of pipes
  - Termination (baffled vs. unbaffled)
  - Source impedance

Note: TL is a property of the muffler; IL is a “system” performance measure.

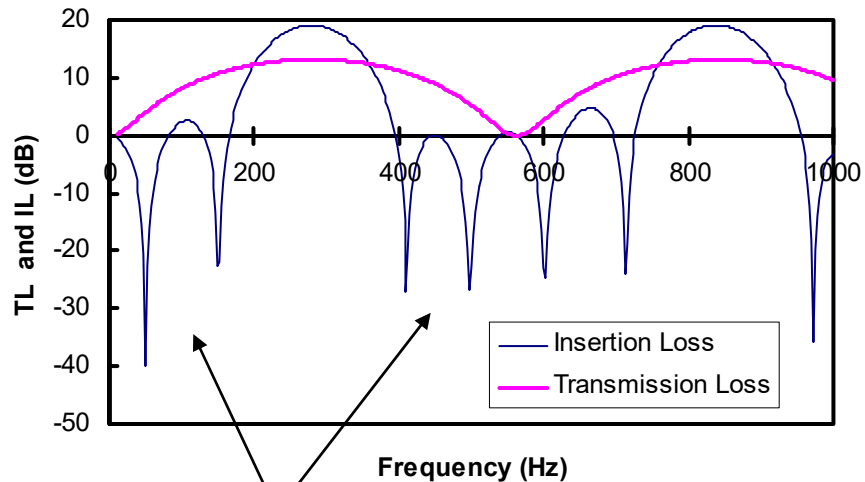

# Example Transmission and Insertion Loss

Dimensions in Inches

Acoustic Wavelength

$$\lambda = \frac{c}{f} = \frac{343 \text{ m/s}}{f}$$

Pipe resonances

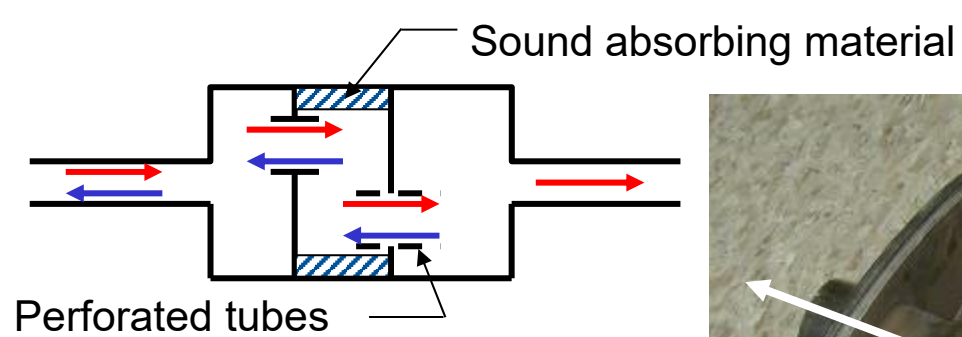

# Reactive Muffler

---

# Reactive and Dissipative Muffler

# The Helmholtz Resonator

$$m\ddot{x} + kx = pS_B \quad \ddot{x} = j\omega u_B \quad x = \frac{u_B}{j\omega}$$

Damping due to viscosity in the neck are neglected

$$j\left(\omega m - \frac{k}{\omega}\right)u_B = pS_B$$

$$z_B = \frac{p}{S_B u_B} = j\left(\frac{1}{S_B^2}\right)\left(\omega m - \frac{k}{\omega}\right)$$

$$z_B \rightarrow \omega = \sqrt{\frac{k}{m}} = c \sqrt{\frac{S_B}{L_{eff}V}}$$

(resonance frequency of the Helmholtz resonator)

# The Helmholtz Resonator

$$TL = 10 \log_{10} \left( 1 + \left( \frac{c/2S}{\omega L_{eff}/S_B - c^2/\omega V} \right)^2 \right)$$

Anechoic termination

$$\begin{aligned} V &= 0.001 \text{ m}^3 \\ L &= 25 \text{ mm} \\ S_B &= 2 \times 10^{-4} \text{ m}^2 \\ S &= 8 \times 10^{-4} \text{ m}^2 \end{aligned}$$

# Quarter Wave Resonator

---

$$TL = 10 \log_{10} \left( \frac{\tan^2(kl) + 4(S/S_B)^2}{4(S/S_B)^2} \right)$$

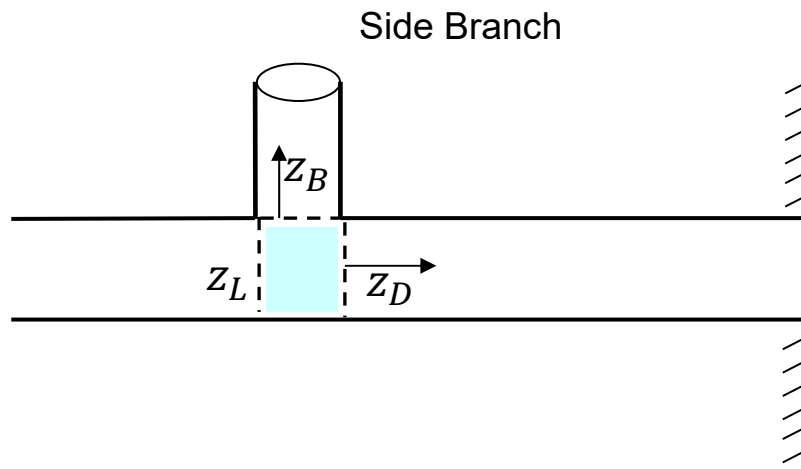

$$z_B = -\frac{j\rho_0 c}{S_B} \cot\left(\frac{\omega L}{c}\right) = 0 \quad \text{and} \quad \frac{\omega L}{c} = \frac{n\pi}{2} \quad n = 1, 3, 5, \dots$$

$$\omega_n = \frac{n\pi c}{2L} \quad n = 1, 3, 5, \dots$$

$$f_n = \frac{nc}{4L} \quad \text{or} \quad L = \frac{nc}{4f} = n \left( \frac{\lambda}{4} \right) \quad n = 1, 3, 5, \dots$$

# Parallel Impedance

$$z_L = \frac{p_L}{Su_L} = \left( \frac{z_B z_D}{z_B + z_D} \right)$$

$$z_B = 0$$

$$z_L = 0$$

# Series (Transfer) Impedance

$$z_{tr} = \frac{p_1 - p_2}{Su}$$

# Muffler Elements

Straight Pipe

Cone

Perforate

Helmholtz Resonator

Quarter Wave Tube

# Overview

- Detailed Design
- Prototyping / Testing

# Muffler Elements Simple Expansion Chamber

$$TL = 10 \log_{10} \left( \frac{1}{4} \left( 4 \cos^2(kL) + \left( m + \frac{1}{m} \right)^2 \sin^2(kL) \right) \right)$$

where  $m$  is the expansion ratio (chamber area/pipe area) = 9 in this example and  $L$  is the length of the chamber.

$$m = d_o^2 / d_i^2$$

If  $m > 10$

$$TL \approx 10 \log_{10} \left( \frac{1}{4} (m^2 \sin^2(kL)) \right)$$

# Muffler Elements Quarter Wave Tube

# Plane Wave Modeling

---

$$\begin{Bmatrix} p_1 \\ S_1 u_1 \end{Bmatrix} = \begin{bmatrix} \cos(kL) & \frac{j\rho_0 c}{S_2} \sin(kL) \\ \frac{jS_1}{\rho_0 c} \sin(kL) & \frac{S_1}{S_2} \cos(kL) \end{bmatrix} \begin{Bmatrix} p_2 \\ S_2 u_2 \end{Bmatrix}$$

# Parallel Impedance

$$p_1 = p_2 = p_B$$

$$S u_1 = S_B u_B + S u_2$$

$$z_B = \frac{p_B}{S_B u_B} = \frac{p_2}{S_B u_B}$$

$$S u_1 = \frac{p_2}{z_B} + S u_2$$

Transfer Matrix

$$\begin{Bmatrix} p_1 \\ S_1 u_1 \end{Bmatrix} = \begin{bmatrix} 1 & 0 \\ 1/z_B & 1 \end{bmatrix} \begin{Bmatrix} p_2 \\ S_2 u_2 \end{Bmatrix}$$

# Series (Transfer) Impedance

$$z_{tr} = \frac{p_1 - p_2}{Su}$$

## Transfer Matrix

$$\begin{Bmatrix} p_1 \\ S_1 u_1 \end{Bmatrix} = \begin{bmatrix} 1 & z_{tr} \\ 0 & 1 \end{bmatrix} \begin{Bmatrix} p_2 \\ S_2 u_2 \end{Bmatrix}$$

# Empirical Equations Perforated Panel

---

Sullivan and Crocker (1978)

$$z_{tr} = (1/\rho c \sigma)(2.4 + j0.02f)$$

$\rho$	density of air
$c$	speed of sound in air
$f$	frequency
$k$	wave number ( $2\pi f/c$ )
$\sigma$	porosity
$t$	panel thickness
$d_h$	hole diameter
$M$	flow Mach number

Sullivan and Crocker (1978))

$$z_{tr} = (1/\sigma)(0.006 + jk(t + 0.75d_h))$$

Rao and Munjal (1986)

$$z_{tr} = (1/\sigma) \left( \underline{7.337 \times 10^{-3}(1 + 72.23M)} + j2.2245 \times 10^{-5} f(1 + 51t)(1 + 204d_h) \right)$$

# Combining Elements

---

For each element:

$$\begin{Bmatrix} p_i \\ S_i u_i \end{Bmatrix} = \begin{bmatrix} T_{11} & T_{12} \\ T_{21} & T_{22} \end{bmatrix}_i \begin{Bmatrix} p_{i+1} \\ S_{i+1} u_{i+1} \end{Bmatrix}$$

Overall:

$$[T_{total}] = [T_1][T_2][T_3] \cdots [T_n] = \begin{bmatrix} T_{11} & T_{12} \\ T_{21} & T_{22} \end{bmatrix}_{total}$$

Transmission Loss

$$TL = 10 \log_{10} \left\{ \frac{S_{in}}{4S_{out}} \left| T_{11} + \frac{S_{out} T_{12}}{\rho c} + \frac{\rho c T_{21}}{S_{in}} + \frac{S_{out}}{S_{in}} T_{22} \right|^2 \right\}$$

# Plane Wave Modeling Virtual Design

---

## Plane Wave Modeling (Virtual Design)

In course work

A real muffler

# Plane Wave Modeling Tips

---

1. Examine the muffler to be modeled and determine a direction of sound propagation. This will normally be the direction having the longest cross-dimension and is also usually the same as the flow path.
2. Details like welds, seams, and fillets that are small compared to an acoustic wavelength can be ignored. However, leaks should be included.
3. Identify and include quarter wave tubes. Often in the case of right-angle turns, quarter wave tubes are unintentionally included. Additionally, be sure to include mass effects in the case of extended inlets or outlets.

# Plane Wave Modeling Tips

---

4. The shape of the cross-section, whether circular, elliptical, or rectangular will have no effect.
5. Sound will be reflected due to changes in the cross-sectional area. Significant area changes should be accounted for. Gradual changes in cross-sectional area can be modeled as cones.
6. If the porosity (perforation rate) exceeds 30%, a perforate can generally be ignored and treated as open.

## Muffler Design

# Summary

---

- Muffler fundamentals introduced.
- Recommend the use of plane wave simulation in the early design stages.
- Numerical simulation is useful for finalizing the geometry and details.
- Prototyping using 3D printing is recommended for an initial test.

# List of Variables

---

$\rho$	density of air
$c$	speed of sound in air
$f$	frequency
$\omega$	angular frequency
$k$	wave number
$\sigma$	porosity
$t$	panel thickness
$d_h$	hole diameter
$\nu$	air kinematic viscosity
$M$	flow Mach number
$C_1$	end correction coefficient
$J_1$	Bessel function of the first kind of order 1
$b$	the distance between two neighboring holes in axial directions
$h$	the distance between two neighboring holes in circumferential directions
$\varepsilon_{mn}$	If either $m$ or $n$ is equal to zero, $\varepsilon_{mn} = 1$ ; otherwise, $\varepsilon_{mn} = 0.5$ ;

# Empirical Equations Perforated Panel

---

Eq. 4 (Rao and Munjal, 1986)

$$Z_{tr} = (1/\sigma) \left( 7.337 \times 10^{-3} (1 + 72.23M) + j 2.2245 \times 10^{-5} f (1 + 51t) (1 + 204d_h) \right)$$

Eq. 5 (Ji, 2010)

$$Z_{tr} = (1/\sigma) \left( \left( 1 + t/d_h \sqrt{8kv/\rho c} \right) + jk(t + C_1 d_h) \right)$$

$$C_1 = \frac{4}{\pi^2} \frac{1}{(\zeta\eta)^{1/2}} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty} \varepsilon_{mn} \frac{J_1^2 \left( \pi \sqrt{(m\zeta)^2 + (n\eta)^2} \right)}{\left( m^2 (h/b) + n^2 (b/h) \right)^{3/2}}$$

$$\zeta = d_h/b, \quad \eta = d_h/h$$

# Empirical Equations Perforated Panel

Eq. 6 (Allam and Åbom, 2011)

$$Z_{tr} = r_c + jx_c$$

$\beta$  is equal to 2 for holes with rounded edges and 4 for holes with sharp edges

Surface Resistance  $R_s = \frac{1}{2} \sqrt{2\eta\rho\omega}$

$$r_c = \operatorname{Re} \left( \frac{j\omega t}{\sigma c} \left( 1 - \frac{2 J_1(\kappa\sqrt{-j})}{\kappa\sqrt{-j} J_0(\kappa\sqrt{-j})} \right)^{-1} \right) + \frac{2\beta R_s}{\sigma \rho c} + \frac{|\hat{u}_h|}{\sigma c}$$

the absolute value or the peak particle velocity inside the holes

$$x_c = \operatorname{Im} \left( \frac{j\omega t}{\sigma c} \left( 1 - \frac{2 J_1(\kappa\sqrt{-j})}{\kappa\sqrt{-j} J_0(\kappa\sqrt{-j})} \right)^{-1} \right) + \frac{\delta_c \omega \left( 1 + \frac{|\hat{u}_h|}{\sigma c} \right)^{-1}}{\sigma c}$$

Dimensionless shear wave-number

$$\kappa = d_h \sqrt{\omega/4\nu}$$

End correction

$$\delta_c = 0.85d_h$$
